The manufacturer works constantly on the further development of all the types and models. Therefore please understand that we have to reserve the right to make design, equipment and technical modifications.

To get to know all the benefits of your new appliance, please read the information contained in these instructions carefully.

The instructions apply to several models. Differences may occur. Text relating only to specific appliances is marked with an asterisk (*).

Instructions for action are marked with a ►, the results of action are marked with a ▷.

1 Appliance at a glance

1.1 Description of appliance and equipment

Note

- Place food inside the appliance as shown in the diagram. This allows the appliance to save energy during operation.
- Shelves, drawers and baskets are arranged for optimum energy efficiency on delivery.

Fig. 1

- | | |
|---|---|
| (1) Adjustable shelves | (8) Coldest area in the refrigerator compartment, for sensitive and perishable foodstuffs |
| (2) Egg tray | (9) Adjustable bottle and jar shelf |
| (3) Butter shelf | (10) Vegetable, salad and fruit bins |
| (4) Adjustable door shelf | (11) Type plate |
| (5) On/Off and temperature controller and interior lighting | (12) Deep freezer drawers |
| (6) Defrost water drain | (13) Adjustable feet at the front |
| (7) Bottle rack | (14) Ice cube tray |

1.2 Appliance range of use

Intended use

The appliance is only suitable for refrigerating food in a domestic or domestic-like environment. This includes, for example, using

- in staff kitchens, bed and breakfast establishments,
- by guests in country houses, hotels, motels and other accommodation,
- for catering and similar services in the wholesale trade.

All other types of use are not permitted.

Foreseeable misuse

The following applications are expressly forbidden:

- Storing and refrigerating medicines, blood plasma, laboratory preparations or similar substances and products based on the Medical Device Directive 2007/47/EC
- Use in areas at risk of explosions
- Use on moving substrates, such as ships, rail travel or aeroplanes
- Storing live animals

Misusing the appliance may lead to damage to the goods stored or they may spoil.

Climate classifications

Depending on the climate classification the appliance is designed to operate in restricted ambient temperatures. The climate classification applying to your appliance is printed on the rating plate.

Note

► Keep to the specified ambient temperatures in order to guarantee that the appliance works properly.

Climate classification	for ambient temperatures of
SN	10 °C to 32 °C
N	16 °C to 32 °C
ST	16 °C to 38 °C
T	16 °C to 43 °C

1.3 Conformity

The refrigerant circuit has been tested for leaks. This appliance complies with the applicable safety stipulations and with directives 2014/35/EU, 2014/30/EU, 2009/125/EG, 2011/65/EU and 2010/30/EU.

1.4 Installation dimensions

Fig. 2

	H
CU(sl) 2311	1372
CU(sl)(ef) 2811	1612
CU(ef)(ag)(fr)(wb) 3311	1812

* This dimension increases by 35 mm (see 4.2) with devices that use wall spacer brackets.

1.5 Saving energy

- Pay attention to good ventilation. Do not cover ventilation holes or grids.
 - Do not install the appliance in direct sunlight, next to an oven, radiator or similar.
 - Energy consumption is dependent on the installation conditions, e.g. ambient temperature (see 1.2). If the ambient temperature deviates from the standard temperature of 25°C, the energy consumption may differ.
 - Open the appliance for as short a time as possible.
 - The lower the temperature is set the higher the energy consumption.
 - Sort food before arranging (see Appliance at a glance).
 - Store all food well packaged and covered. A build up of frost is avoided.
 - Only take food out for as long as necessary so that it doesn't warm up too much.
 - Inserting hot food: let it cool to room temperature first.
 - Thaw frozen food in the refrigerator.
 - If there is a thick layer of frost in the appliance: defrost the appliance.
- Dust deposits increase energy consumption:
- For refrigerators with heat exchangers dust the metal grid on the back of the appliance once a year.

2 General safety information

Danger for the user:

- This device can be used by children and people with impaired physical, sensory or mental abilities or with a lack of experience and knowledge provided that they are supervised or have received instruction in the safe use of this device, and about the resulting hazards. Children must not play with this appliance. Cleaning and user maintenance work must not be carried out by children without adult supervision. Children aged between 3 and 8 are allowed to load and unload the appliance. Children below the age of 3 must be kept away from the appliance unless they are under continuous adult supervision.
- When disconnecting the appliance from the supply, always take hold of the plug. Do not pull the cable.
- In the event of a fault pull out the mains plug or deactivate the fuse.
- Do not damage the mains power cable. Do not operate the appliance with a defective mains power cable.
- Have any repairs to or intervention in the appliance, and any change of the mains power cable, carried out by the customer service only or by other specialised personnel trained for the purpose.
- Only assemble, connect and dispose of the appliance according to the instructions.

Controls and displays

- Please keep these instructions in a safe place and pass them on to any subsequent owners.
- Special-purpose lamps (incandescent lamps, LEDs, fluorescent tubes) in the appliance serve to illuminate the appliance interior and are not suited for room illumination.

Fire hazard:

- The refrigerant R 600a is environmentally friendly but flammable. Escaping refrigerant may ignite.
 - Do not damage the refrigerant circuit pipes.
 - Do not allow naked flames or ignition sources to enter the appliance.
 - Do not use any electrical appliances in the interior (e.g. steam cleaners, heaters, ice cream maker etc.).
 - If refrigerant escapes: remove any naked flames or sources of ignition from the leakage area. Ventilate the room well. Notify the after-sales service.
- Do not store explosives or sprays using combustible propellants such as butane, propane, pentane, etc. in the appliance. To identify these spray cans, look for the list of contents printed on the can, or a flame symbol. Gases possibly escaping may ignite due to electrical components.
- Keep burning candles, lamps and other items with naked flames away from the appliance so that they do not set the appliance on fire.
- Please be sure to store alcoholic drinks or other packaging containing alcohol in tightly closed containers. Any alcohol that leaks out may be ignited by electrical components.

Danger of tipping and falling:

- Do not misuse the plinth, drawers, doors etc. as a step or for support. This applies particularly to children.

Danger of food poisoning:

- Do not consume food which has been stored too long.

Danger of frostbite, numbness and pain:

- Avoid lasting skin contact with cold surfaces or refrigerated/frozen food or take protective steps, e.g. wear gloves. Do not consume ice cream, water ice or ice cubes immediately and do not consume them too cold.

Danger of injury and damage:

- Hot steam can lead to injury. Do not use electrical heating or steam cleaning equipment, open flames or defrosting sprays to defrost.
- Do not use sharp implements to remove the ice.

Danger of crushing:

- Do not hold the hinge when opening and closing the door. Fingers may get caught.

Symbols on the appliance:

The symbol can be located on the compressor. It refers to the oil in the compressor and indicates the following danger: Swallowing or inhaling can be fatal. This is only relevant for recycling. There is no danger in normal operation.

Please observe the specific information in the other sections:

	DANGER	identifies a situation involving direct danger which, if not obviated, may result in death or severe bodily injury.
	WARNING	identifies a dangerous situation which, if not obviated, may result in death or severe bodily injury.
	CAUTION	identifies a dangerous situation which, if not obviated, may result in minor or medium bodily injury.
	NOTICE	identifies a dangerous situation which, if not obviated, may result in damage to property.
	Note	identifies useful information and tips.

3 Controls and displays

3.1 Operating controls

(1) Temperature controller (2) Cool-Plus switch

Fig. 3

4 Putting into operation

4.1 Transporting the appliance

CAUTION

Risk of injury and danger of damage as a result of incorrect transport!

- Transport the appliance in a packed condition.
- Transport the appliance upright.
- Do not transport the appliance without assistance.

4.2 Installing the appliance

WARNING

Fire hazard due to dampness!

If live parts or the mains lead become damp this may cause short circuits.

- ▶ The appliance is designed for use in enclosed areas. Do not operate the appliance outdoors or in areas where it is exposed to splash water or damp conditions.

WARNING

Risk of fire due to short circuit!

If the mains cable/connector of the appliance or of another appliance touch the rear of the appliance, the mains cable/connector may be damaged by the appliance vibrations, leading to a short circuit.

- ▶ Stand the appliance so that it is not touched by connectors or main cables.
- ▶ Do not plug the appliance or any others into sockets located near the rear of the appliance.

WARNING

Fire hazard due to refrigerant!

The refrigerant R 600a is environmentally friendly but flammable. Escaping refrigerant may ignite.

- ▶ Do not damage the piping of the refrigeration circuit.

WARNING

Fire hazard and danger of damage!

- ▶ Do not place appliances emitting heat e.g. microwaves, toasters etc. on the appliance!

WARNING

Blocked ventilation openings pose a risk of fire and damage!

- ▶ Always keep the ventilation openings clear. Always ensure that the appliance is properly ventilated!

NOTICE

Risk of damage due to condensate!

- ▶ Do not install the appliance directly alongside a further refrigerator/freezer.

- ☐ In the event that the appliance is damaged, contact the supplier immediately before connecting to the mains.
- ☐ The floor at the site must be flat and level.
- ☐ Do not install the appliance in a location where it is exposed to direct radiation of the sun, next to a cooker, heater and similar.
- ☐ Always stand the appliance backed directly to the wall using the enclosed wall spacers (see below).
- ☐ The appliance may be moved only when it is empty.
- ☐ The surface supporting the appliance must be at the same level as the surrounding floor.
- ☐ Do not install the appliance without assistance.
- ☐ The more R 600a refrigerant there is in the appliance, the larger the room in which the appliance is standing needs to be. In rooms that are too small, a flammable mix of gas and air may be created if there is a leak. According to the EN 378 standard, every 11 g of R 600a refrigerant requires at least 1 m³ space in the room for the appliance. The amount of refrigerant in your appliance is on the type plate inside the appliance.

- ▶ Detach the connecting cable from the rear of the appliance, removing the cable holder at the same time because otherwise there will be vibratory noise!
- ▶ Remove the protective film from the decorative trims.
- ▶ Remove all transit supports.

The spacers supplied with some appliances must be used to achieve the stated energy consumption. These will extend the depth of the appliance by approx. 35 mm. The appliance is fully functional if the spacers are not used, but does have a slightly higher energy consumption.

- ▶ For appliances supplied with wall spacers, mount the wall spacers on the back of the appliance, left and right above the compressor.
- ▶ Dispose of packaging material (see 4.5).
- ▶ Align the appliance so that it stands firmly and on a level by applying the accompanying spanner to the adjustable-height feet (A) and using a spirit level.

Note

- ▶ Clean the appliance (see 6.2).

If the appliance is installed in a very damp environment, condensate may form on the outside of the appliance.

- ▶ Always see to good ventilation at the installation site.

4.3 Changing over the door hinges

You can change over the door hinges if necessary.

Ensure that the following tools are to hand:

- ☐ Torx® 15
- ☐ Torx® 25
- ☐ Screwdriver
- ☐ Cordless screwdriver, if necessary
- ☐ Second person for fitting work, if needed

4.3.1 Detaching the upper door

Note

- ▶ Remove any food from the door racks before removing the door, so that no food falls out.

Putting into operation

Fig. 4

- Pull off the cover Fig. 4 (1) forwards and upwards.
- Lift off the cover Fig. 4 (2).

CAUTION

Risk of injury if the door tips!

- Take good hold of the door.
- Set down the door carefully.

- Unscrew the upper turn hinge Fig. 4 (3) (2x Torx® 25) Fig. 4 (4) and lift it off.
- Lift up the upper door and set it aside.

4.3.2 Detaching the lower door

- Open the lower door.

CAUTION

Risk of injury if the door tips!

- Take good hold of the door.
- Set down the door carefully.

- Unscrew the fastening screws Fig. 5 (11) (2 x Torx® 25) and pull the centre bearing block out of the lower door.
- Remove plastic washer Fig. 5 (10).
- Lift up the door and set it aside.

4.3.3 Transferring the middle bearing elements

Fig. 5

- Remove the cover Fig. 5 (12) carefully.
- Re-install the cover Fig. 5 (12) on the opposite side.

4.3.4 Transferring the lower bearing elements

Fig. 6

- Unscrew fastening screws Fig. 6 (21).
- Remove the lower bearing block Fig. 6 (23), complete with bearing bolt Fig. 6 (24), washer Fig. 6 (26) and adjustable foot Fig. 6 (22).
- Unscrew the bearing bolt Fig. 6 (24), complete with washer Fig. 6 (26), re-locate it into the mounting hole on the opposite side of the bearing block and tighten again.
- Carefully remove the cover plate Fig. 6 (25) and re-locate it to the other side.
- Fasten the lower bearing block Fig. 6 (23), complete with bearing bolt Fig. 6 (24), washer Fig. 6 (26) and adjustable foot Fig. 6 (22) to the new hinge side, with the help of a cordless screwdriver if necessary, and **tighten (with 4 Nm)** once again.

4.3.5 Re-locate the handles

- Lift the plug Fig. 7 (30) out of the door bearing bush and re-locate.

Fig. 7

- Dismantle the door handle Fig. 7 (31), plug Fig. 7 (32) and pressure plates Fig. 7 (33), and re-locate to the opposite side.
- Ensure that the pressure plates engage correctly on the opposite side when they are fitted.

4.3.6 Fitting the lower door

- Lower the bottom door onto the bearing bolt Fig. 6 (24).
- Close the door.
- Insert the centre bearing block Fig. 5 (13) turned through 180° into the lower door and fasten firmly (**with 4 Nm**) to the new hinge side with the fastening screws (2 x Torx® 25).
- Refit plastic washer Fig. 5 (10).

4.3.7 Fitting the upper door

- Set the upper door down on the centre bearing block.

- ▶ Insert the upper turn hinge *Fig. 4 (3)* in the door on the new hinge side.
- ▶ Screw in the upper bearing block **tightly (with 4 Nm)** (2 x Torx® 25) *Fig. 4 (4)*. Use a cordless screwdriver if necessary.
- ▶ Fit the cover *Fig. 4 (1)* on the opposite side by sliding it rearwards and latching it into place.
- ▶ Press the cover *Fig. 4 (2)* on the opposite side down into place until it latches.
- ▶ Unscrew the adjustable foot *Fig. 6 (22)* on the lower bearing block *Fig. 6 (23)* until it reaches the floor.

WARNING

Risk of injury due to the door dropping out!
If the bearing parts are not screwed into place firmly enough, the door may drop out. This may lead to severe injuries. What is more, the door may not close and therefore the appliance may fail to cool properly.

- ▶ Screw the turn hinges firmly into place with 4 Nm.
- ▶ Check all of the screws and retighten if necessary.

4.4 Insertion into a row of kitchen units

* For appliances supplied with wall spacers, the measurement increases by 35 mm (see 4.2).

The appliance can be built into kitchen units. A top cupboard *Fig. 8 (2)* can be added above the appliance in order to bring the appliance *Fig. 8 (1)* up to the height of the fitted kitchen units.

When installing with kitchen units (max. depth 580 mm), the appliance can be positioned directly next to the kitchen cabinet *Fig. 8 (3)*. The appliance will project by 34 mm* at the sides and 50 mm* in the centre of the appliance in relation to the kitchen cabinet front.

- At the back of the stack cabinet there has to be a ventilation duct of at least 50 mm depth throughout the width of the stack cabinet.
- The cross section of the ventilation gap below the ceiling must be at least 300 cm².
- the larger the ventilation space, the more energy-saving the appliance is in operation.

If the appliance is installed with the hinges next to a wall *Fig. 8 (4)*, the distance between appliance and wall has to be at least 40 mm. This corresponds to the projection of the handle when the door is open.

4.5 Disposing of packaging

WARNING

Danger of suffocation due to packing material and plastic film!
▶ Do not allow children to play with packing material.

The packaging is made of recyclable materials:

- corrugated board/cardboard
 - expanded polystyrene parts
 - polythene bags and sheets
 - polypropylene straps
 - nailed wooden frame with polyethylene panel*
- ▶ Take the packaging material to an official collecting point.

4.6 Connecting the appliance

NOTICE

Failure to connect properly
Damage to the electronics.
▶ Do not use a standalone inverter.
▶ Do not use an energy saving plug.

WARNING

Failure to connect properly
Fire.
▶ Do not use an extension cable.
▶ Do not use distributor blocks.

The type of current (alternating current) and voltage at the installation site have to conform with the data on the type plate (see Appliance at a glance).

The socket must be properly earthed and fused. The tripping current for the fuse must be between 10 A and 16 A.

The socket must be easily accessible so that the appliance can be quickly disconnected from the supply in an emergency. It must be outside the area of the rear of the appliance.

- ▶ Check the electrical connection.
- ▶ Plug in the power plug.

4.7 Switching on the appliance

Put the appliance into operation about 2 hours before first loading food to be frozen.

- ▶ Turn the temperature control *Fig. 3 (1)* to the right, from the 0 setting to point 3.
- ▷ The interior light is on.

5 Control

5.1 Refrigerator compartment

The natural circulation of air in the refrigerator compartment results in zones differing in temperature. It is coldest directly above the vegetable drawers and at the rear wall. It is warmest at the top front of the compartment and in the door.

5.1.1 Food refrigeration

- ▶ Store perishable food such as ready-to-serve dishes, meat products and sausages in the coldest zone. Place butter and preserves in the upper area and in the door (see Appliance at a glance).
- ▶ Use recyclable plastic, metal, aluminium and glass containers and cling film for wrapping.
- ▶ Always store liquids and food which is subject to odour or taste transfer in closed containers or cover them.
- ▶ Foods which give off a large amount of ethylene gas and delicate foods, such as fruit, vegetables, salad, should always be stored separately or wrapped so as not to reduce the storage life; e.g. do not store tomatoes together with kiwis or cabbage.
- ▶ Do not store food too close together to enable good air circulation.
- ▶ To safeguard bottles from tipping over: move the bottle holder.

5.1.2 Setting the temperature

The temperature can be set between 1 (warmest temperature, minimum cooling performance) and 7 (coldest temperature, maximum cooling performance).

The middle control setting is recommended, then a middle temperature of approx. 5 °C is established in the refrigerator compartment.

To ensure ideal temperatures for storing frozen foods, a setting of "4" to "7" on the temperature controller is recommended. Selecting "7" makes it possible to achieve temperatures under 0 °C in the coldest part of the fridge compartment.

An average temperature of approx. -18 °C is then established in the freezer compartment

- ▶ Turn the temperature control *Fig. 3 (1)*.

The temperature depends on the following factors:

- the door opening frequency
- the room temperature at the site where the appliance is installed
- the type, temperature and quantity of frozen food
- ▶ Adjust the temperature as needed, using the control.

5.1.3 CoolPlus function

At low room temperatures of 18 °C or lower:

- ▶ Press the Cool-Plus switch *Fig. 3 (2)*.
- ▷ The deep temperatures in the freezer compartment are ensured.
- Once the room temperature is again higher than 18 °C :
- ▶ Deactivate the Cool-Plus *Fig. 3 (2)* switch manually.

Note

- ▶ At normal room temperatures, in excess of 18 °C, the Cool-Plus switch should be turned off, as it is **not** required.

5.1.4 Shelves

Moving or removing shelves

The shelves have stops preventing them from being unintentionally pulled out.

Fig. 9

- ▶ Lift the shelf slightly and pull forward a little.
- ▶ Adjust the height of the shelf. To do so, push the cut-outs along the supports.
- ▶ In order to remove the shelf fully, place it at a slant and pull out towards the front.
- ▶ Insert shelf with the raised edge pointing upwards at the back.
- ▷ The food does not freeze onto the rear wall.
- ▶ Insert the bottle shelf at any position, but not at the very bottom.

Dismantling shelves

- ▶ The shelves can be dismantled for cleaning.

5.1.5 Using the sectioned shelf

CAUTION

Danger of laceration!

The shelf may break. The broken fragments may cause laceration.

- ▶ Remove only empty shelves.

Fig. 10

- ▶ The glass shelf with stop face (2) has to be at the back.
- ▶ The glass plate (1) with pull-out stops must be at the front so that the stops (3) face downwards.
- Adjusting the height:
- ▶ Pull the glass plates out forwards one by one.
- ▶ Remove the support from the catch mechanism and click into place at the required height.
- Using both shelves:
- ▶ Lift the top glass plate and pull the bottom glass plate forwards.

5.1.6 Door racks

Removing the storage rack

Fig. 11

Dismantling door racks

Fig. 12

- The door racks can be dismantled for cleaning.

5.2 Freezer compartment

You can store frozen food, make ice cubes and freeze fresh food in the freezer compartment.

5.2.1 Freezing food

The rating plate indicates the maximum quantity of fresh food you can freeze within 24 hours (see Appliance at a glance) under "Freezing capacity ... kg/24h".

The maximum load of frozen food for the drawers is 25 kg each and for the shelves 35 kg each.

CAUTION

Risk of injury due to broken glass!

Bottles and cans containing drinks may burst when being frozen. This applies particularly to sparkling drinks.

- Do not freeze bottles and cans containing drinks!

- 24 h before freezing food, set the temperature to a medium to cold position.
- To switch on Cool-Plus: press Cool-Plus button. Fig. 3 (2)
- ◻ The freezer temperature drops, the appliance operates with the maximum refrigerating capacity.

In order that the food is rapidly frozen through to the core, do not exceed the following quantities per pack:

- Fruit, vegetables up to 1 kg
- Meat up to 2.5 kg
- Pack the food in portions in freezer bags, reusable plastic, metal or aluminium containers.
- Spread the food over the shelf. Do not allow it to contact and thaw items that are already frozen.
- Set the temperature back again 24 h after placing the food inside.
- If the room temperature is higher than 18 °C:
- switch off Cool-Plus: press Cool-Plus button Fig. 3 (2).

5.2.2 Storage life

Standard values for the storage life of various types of food in the freezer compartment:

Ice-cream	2 to 6 months
Sausage, ham	2 to 6 months
Bread, bakery products	2 to 6 months
Game, pork	6 to 10 months
Fatty fish	2 to 6 months
Lean fish	6 to 12 months
Cheese	2 to 6 months
Poultry, beef	6 to 12 months
Vegetables, fruit	6 to 12 months

The values indicated for storage life are standard ones.

5.2.3 Thawing food

- in the refrigerator compartment
- in a microwave oven
- in a conventional or fan oven
- at room temperature
- Remove only as much food as is required. Use thawed food as quickly as possible.
- Food once thawed should be re-frozen only in exceptional cases.

5.2.4 Drawers

- To store frozen food directly on the shelves: pull the drawer forwards and lift it out.

5.2.5 Shelves

- To remove the shelf: lift up at the front and pull out.
- To put the shelf back: simply push in as far as it will go.

5.2.6 VarioSpace

Apart from being able to remove the drawers, you can also remove the shelves, creating space for large items of frozen food. Poultry, meat, large pieces of game and high bakery products can be frozen in one piece and prepared.

- The maximum load of frozen food for the drawers is 25 kg each and for the shelves 35 kg each.

6 Maintenance

6.1 Manual defrosting

Fridge compartment:

The **refrigerator compartment** is defrosted automatically. The defrost water evaporates as a result of the heat of the compressor. Drops of water on the rear wall are perfectly normal.

- ▶ Regularly clean the drain opening to allow the water to flow away (see 6.2) .

Freezer compartment:

A layer of frost or ice can build up in the **freezer compartment** after a long period of operation.

The layer of frost or ice builds up faster if the appliance is opened often or if the food is warm when placed inside. However, a thick layer of ice will increase the appliance's energy consumption. You should therefore defrost the appliance regularly.

WARNING

Danger of injury and damage

- ▶ Do not use any mechanical aids or other means not recommended by the manufacturer in order to accelerate the defrosting process.
- ▶ Do not use electrical heating or steam cleaning equipment, open flames or defrosting sprays to defrost.
- ▶ Do not use sharp implements to remove the ice.
- ▶ Do not damage the pipework in the refrigerant circuit.

- ▶ Switch off the appliance.
- ▶ Pull out the power plug or switch off the fuse.
- ▶ If possible, put the frozen goods in the freezer drawer, wrapped in newspaper or a blanket, and store in a cool place.
- ▶ Place a pan with hot, not boiling water on a middle shelf.

- ▷ Defrosting is speeded up.
- ▷ Defrost water is collected in the drawers.
- ▶ Leave the door of the appliance open while defrosting.
- ▶ Remove detached pieces of ice.
- ▶ If necessary, pick up defrost water several times, using a sponge or cloth.
- ▶ Clean the appliance (see 6.2) .

6.2 Cleaning the appliance

WARNING

Risk of injury and damage as a result of hot steam!

Hot steam can lead to burns and can damage the surfaces.

- ▶ Do not use any steam cleaners!

NOTICE

Incorrect cleaning damages the appliance!

- ▶ Do not use cleaning agents in concentrated form.
- ▶ Do not use any scouring or abrasive sponges or steel wool.
- ▶ Do not use any sharp or abrasive cleaning agents, nor any that contain sand, chloride or acid.
- ▶ Do not use chemical solvents.
- ▶ Do not damage or remove the type plate on the inside of the appliance. It is important for the customer service.
- ▶ Do not pull off, bend or damage cables or other components.
- ▶ Do not allow any cleaning water to enter the drain channel, ventilation grille or electrical parts.
- ▶ Please use soft cleaning cloths and a universal pH-neutral cleaning agent.
- ▶ Please use cleaning and care products suitable for contact with foodstuffs in the appliance interior.

- ▶ **Empty appliance.**
- ▶ **Pull out the power plug.**

- ▶ Clean the **vent grille** regularly.
- ▷ Dust deposits increase energy consumption.
- ▶ Clean **plastic outer and inner surfaces** with lukewarm water and a little washing-up liquid.

NOTICE

Risk of damage from stainless steel care products!

The **stainless steel doors** and **stainless steel side panels** are treated with a premium surface finish.

Stainless steel care products attack these surfaces.

- ▶ Only use a soft, clean cloth to wipe down **finished door and side panel surfaces** and **painted door and side panel surfaces**. To remove heavy dirt, use a little water or neutral detergent. Alternatively, you can use a micro-fibre cloth.

- ▶ Clean **drain hole**: Remove deposits with a narrow instrument, e.g. a cotton bud.

- ▶ Most of the **parts** can be dismantled for cleaning: see the relevant chapter.
- ▶ Clean **items of equipment** by hand with lukewarm water and a little washing-up liquid.

After cleaning:

- ▶ Wipe dry the appliance and items of equipment.
- ▶ Connect the appliance and switch it on again.
When the temperature is sufficiently cold:
- ▶ Put the food back inside.

6.3 Changing the interior light

In the device, an LED lamp is used as standard illumination for the interior space.

When an incandescent bulb is used:

- ☐ Use an incandescent lamp with max. 15 W and E14 socket.
- ☐ Power supply (AC) and voltage at the operating point must comply with the details on the rating plate (see Appliance at a glance).

When a LED is used:

- ☐ Use only the original LED lamp from the manufacturer. The lamp can be obtained through customer service or a specialist dealer (see 6.4) .

**WARNING**

Risk of injury from LED light!

The light intensity of the LED lighting corresponds to laser class 1/1M.

If the cover is removed:

- ▶ Do not look directly into the light at close quarters through optical lenses. Doing so may damage your eyes.

**WARNING**

Fire hazard from the LED light!

If different LED lights are used, there is a danger of overheating or fire.

- ▶ Use the manufacturer's original LED light.

If the lamp is defective, exchange it as follows:

- ▶ Switch off the appliance.
- ▶ Take hold of the lamp cover.
- ▶ As shown in the diagram, press open the lamp cover on the inside at the front, and pull it off to the side.
- ▶ Replace the lamp.
- ▶ Put on the lamp cover again and snap it into place.

6.4 Customer service

First check whether you can correct the fault yourself by reference to the list (see Malfunction). If this is not the case, please contact the customer service whose address is given in the enclosed customer service list.

**WARNING**

Risk of injury if repair work is not carried out professionally!

- ▶ Have any repairs and action - not expressly specified - on the appliance and mains cable carried out by service personnel only. (see Maintenance)

- ▶ Read the appliance designation

Fig. 13 (1), service No. Fig. 13 (2) and serial No. Fig. 13 (3) off the type plate located inside the appliance on the left-hand side.

Fig. 13

- ▶ Notify the customer service, specifying the fault, appliance designation Fig. 13 (1), service No. Fig. 13 (2) and serial No. Fig. 13 (3).
- ▶ This will help us to provide you with a faster and more accurate service.
- ▶ Keep the appliance closed until the customer service arrives.
- ▶ The food will stay cool longer.
- ▶ Pull out the mains plug (not by pulling the connecting cable) or switch off the fuse.

7 Malfunctions

Your appliance is designed and manufactured for a long life span and reliable operation. If a malfunction nonetheless occurs during operation, check whether it is due to a handling error. In this case you will have to be charged for the costs incurred, even during the warranty period. You may be able to rectify the following faults yourself:

Appliance does not work.

- The appliance is not switched on.
- ▶ Switch on the appliance.
- The power plug is not properly inserted in the wall socket.
- ▶ Check power plug.
- The fuse of the wall socket is not in order.
- ▶ Check fuse.

The compressor runs for a long time.

- The compressor switches to a low speed when little cold is needed. Although the running time is increased as a result, energy is saved.
- ▶ This is normal in energy-saving models.

A LED on the bottom rear of the appliance (at the compressor) flashes regularly every 15 seconds*.

- The inverter is equipped with a diagnostic LED.
- ▶ The flashing is normal.

Excessive noise.

- Due to the various speed steps, speed-regulated* compressors can generate different running noises.
- ▶ The sound is normal.

A bubbling and gurgling noise.

- This noise comes from the refrigerant flowing in the refrigeration circuit.
- ▶ The sound is normal.

A quiet clicking noise.

- The noise is produced whenever the refrigeration unit (motor) automatically switches on or off.
- ▶ The sound is normal.

A hum. It is briefly a little louder when the refrigeration unit (the motor) switches on.

- The refrigeration increases automatically when fresh food has just been placed in the appliance or the door has been left open for a while.
- ▶ The sound is normal.
- The ambient temperature is too high.
- ▶ Solution: (see 1.2)

Vibratory noise.

- The appliance is not fixed to the ground. The running of the cooling unit therefore makes objects and adjacent furniture vibrate.
- ▶ Adjust appliance via the height-adjustable feet.
- ▶ Move bottles and containers apart.

The outer surfaces of the appliance are warm*.

- The heat of the refrigeration circuit is used to prevent condensate from forming.
- ▶ This is normal.

The temperature is not cold enough.

- The door of the appliance is not properly closed.
- ▶ Close the door of the appliance.
- Insufficient ventilation.
- ▶ Keep ventilation grille clear, and clean it.
- The ambient temperature is too high.
- ▶ Solution: (see 1.2) .
- The appliance was opened too frequently or for too long.
- ▶ Wait to see whether the appliance reaches the required temperature by itself. If not, please contact the after sales service (see Maintenance).

Decommissioning

→ The appliance is too close to a source of heat (stove, heater etc).

- ▶ Change the position of the appliance or the source of heat.

The internal light does not come on.

→ The appliance is not switched on.

- ▶ Switch on the appliance.

→ The illuminant (delivery with LED illuminant) is defective.

WARNING

Risk of injury from LED light!

The light intensity of the LED lighting corresponds to laser class 1/1M.

If the cover is removed:

- ▶ Do not look directly into the light at close quarters through optical lenses. Doing so may damage your eyes.

-
- ▶ Change the lighting (see Maintenance).

With an ambient temperature below 18 °C the device is slightly warmed in places on the inner surface of the fridge compartment's right side wall.

→ This is a necessary part of the function.

- ▶ This is normal.

8 Decommissioning

8.1 Switching off the appliance

- ▶ Turn temperature control *Fig. 3 (1)* to 0.

8.2 Taking the appliance out of service

- ▶ Empty the appliance.
- ▶ Switch off the appliance (see Decommissioning).
- ▶ Remove mains connector.
- ▶ Clean the appliance (see 6.2) .

- ▶ Leave the door open to prevent odour.

9 Disposing of the appliance

The appliance contains some reusable materials and should be disposed of properly - not simply with unsorted household refuse. Appliances which are no longer needed must be disposed of in a professional and appropriate way, in accordance with the current local regulations and laws.

When disposing of the appliance, ensure that the refrigeration circuit is not damaged to prevent uncontrolled escape of the refrigerant it contains (data on type plate) and oil.

- ▶ Disable the appliance.
- ▶ Pull out the plug.
- ▶ Cut through the connecting cable.
