**a. Wheel Circumference****b. Popular Tires Circumference Reference Table**

Tire Size	Circumference Number	Tire Size	Circumference Number
18 Inch	1436 mm	700x20C	2114
20 Inch	1596	700x23C	2133
22 Inch	1759	700x25C	2146
24x1.75	1888	700x28C	2149
24 Inch	1916	700x32C	2174
24x 1 3/8	1942	700x40C	2224
26x1.0	1973		
26x1.5	2026		
26x1.6	2051		
26x2	2114		

**SET BUTTON**

1. A quick press of the **SET** button advances the flickering digit by 1.
2. hold down the **SET** button 1 seconds till the flickering digit is changed to the next digit.
3. Hold down this button 3 seconds to get out the setting

**English****Current Speed**

The current speed is always displayed on the upper set when riding. It displays current speed up to 99.9 Km/h or 62.0 Mile/h (for wheel diameters over 24 inches).

**DST : Trip Distance**

The DST function accumulates the distance data from the last RESET operation as long as the bike is being ridden.

**ODO : Odometer**

The ODO accumulates total distance as long as the bicycle is running, the ODO data can be cleared by the All Clear operation only.

**AVG : Average Speed**

1. It is calculated from the DST divided by the RTM. The average data counted is from the last RESET to current point.
2. It will display "0.0" when RTM is less than 4 seconds.
3. It is updated about one second when RTM is over 4 seconds.

**WHEEL CIRCUMFERENCE**

1. Roll the wheel until the valve stem at its lowest point close to the ground, then mark this first point on the ground. (Fig. a)
2. Get on the bike and have a helper push you until the valve stem returns to its lowest point. Mark the second point on the ground. (Sitting on the bike achieves a more accurate reading since the weight of the rider slightly changes the wheel circumference).
3. Measure the distance between the marks in millimeters. Enter this value to set the wheel circumference.
4. Option: Get a suitable circumference value from the table. (Fig. b)

**PULSANTE SET**

1. Premendo velocemente il pulsante SET la cifra lampeggiante aumenterà di 1.
2. Tenere premuto il pulsante SET per 1 secondo per passare alla cifra seguente da impostare, la quale comincerà a lampeggiare.
3. Tenere premuto questo pulsante per 3 secondi per uscire dalla modalità di impostazione.

**Italiano****Velocità attuale**

La velocità attuale è sempre visualizzata nella parte superiore durante l'allungamento. La velocità attuale viene visualizzata fino a 99.9 Km/h oppure 62.0 Miglia/h (per diametri della ruota superiori ai 24 pollici).

**DST: Distanza Tragitto**

La funzione DST accumula i dati della distanza percorsa con la bicicletta a partire dall'ultima operazione di RIPRISTINO.

**ODO: Odometro**

La funzione ODU accosta la distanza totale percorsa dalla bicicletta, e i dati ODO possono essere azzerati solo tramite l'operazione "cancello tutto".

**AVG: Velocità Media**

1. E' calcolato dividendo DST per RTM. Il dato di media calcolato riguarda il percorso effettuato dall'ultimo RIPRISTINO al punto attuale.
2. Quando RTM è inferiore a 4 secondi, verrà visualizzato il valore "0.0".
3. E' aggiornato circa ogni secondo quando RTM è superiore a 4 secondi.

**CIRCONFERENZA RUOTA**

1. Fare girare la ruota finché la valvola sulla ruota raggiungerà il punto più vicino al terreno, poi tracciare sul terreno un segno corrispondente a quel punto. (Fig. a)
2. Salire sulla bicicletta e farsi aiutare da qualcuno che lo spinga fino a quando la valvola sulla ruota raggiungerà nuovamente il punto più vicino al terreno. Tracciare un altro segno sul terreno. (Salire sulla bicicletta permette di ottenere una misurazione più accurata, in quanto il peso della persona modifica leggermente la circonferenza della ruota).
3. Misurare la distanza in millimetri tra i due segni. Inserire questo valore per impostare la circonferenza della ruota.
4. Opzione: Selezionare un valore di circonferenza adatto dalla tabella. (Fig. b)

**EINSTELLTASTE**

1. Kurz auf die SET-Taste (Einstelltaste) drücken, um die blinkende Ziffernsteile je um 1 auf die nächsthöhere Ziffer umzustellen.
2. Die SET-Taste (Einstelltaste) 1 Sekunde drücken, bis die blinkende Ziffernsteile auf die nächsthöhere Ziffer umgestellt wurde.
3. Zum Auswählen dieser Einstellung diese Taste 3 Sekunden drücken.

**Deutsch**

**Gegenwärtige Geschwindigkeit**  
Die gegenwärtige Geschwindigkeit wird während dem Fahren stets im oberen Displaystrahl angezeigt. Die gegenwärtige Geschwindigkeit kann bis zu einem Wert von 99,9 km/h oder 62,0 Meilen/Stunde (m/h) (für Raddurchmesser größer als 24 Zoll) angezeigt werden.

**DST: Routendistanz**

Mit der DST-Funktion wird die Distanz von der letzten Betätigung der RESET-Funktion (Rücksetzfunktion) zusammengezählt, solange Sie mit dem Fahrrad fahren.

**ODO : Kilometerzähler**

Der Kilometerzähler (ODO) zählt die Gesamtdistanz zusammen, solange das Fahrrad benutzt wird. Die Kilometerzählerdaten (ODO) werden nur mit der Alle-Löschen-Funktion gelöscht.

**AVG : Durchschnittliche Geschwindigkeit**

1. Diese durchschnittliche Geschwindigkeit wird von der DST dividiert durch das RTM berechnet. Die gezeigten Durchschnittsdaten stellen die Daten der letzten Betätigung der RESET-Funktion (Rücksetzfunktion) bis zur gegenwärtigen Stelle dar.
2. Die Ziffer "0.0" wird angezeigt, wenn das RTM weniger als 4 Sekunden beträgt.
3. Diese Daten werden ungefähr alle Sekunde aktualisiert, wenn das RTM länger als 4 Sekunden dauert.

**DEN RADUMFANG BEMESSEN**

1. Das Rad so weit rollen, bis sich das Ventil zuunterst und am nächsten zum Boden befindet, und den ersten Punkt auf dem Boden markieren (Abb. a).
2. Steigen Sie auf das Fahrrad und lassen Sie sich um eine Radumreihenfolge schieben, bis sich das Ventil wiederum zuunterst und am nächsten zum Boden befindet. Markieren Sie dann diesen zweiten Punkt auf dem Boden. (Durch das Sitzen auf dem Fahrrad beim Fahren wird ein genauerer Maßwert erzielt, da der Wert des Radumfangs durch das Gewicht des Fahrers leicht verändert wird.)
3. Messen Sie danach den Abstand zwischen diesen beiden Punkten auf dem Boden in Millimetern. Geben Sie diesen Wert zum Einstellen des Radumfangs an.
4. Tipp: Anhand der Tabelle kann der passende Wert des Radumfangs berechnet werden (Abb. b).
