A beacon of safety

Pigeon Point Lighthouse, 1872, one of the tallest lighthouses in America

Souter Lighthouse, 1871, world's first lighthouse built to use electricity

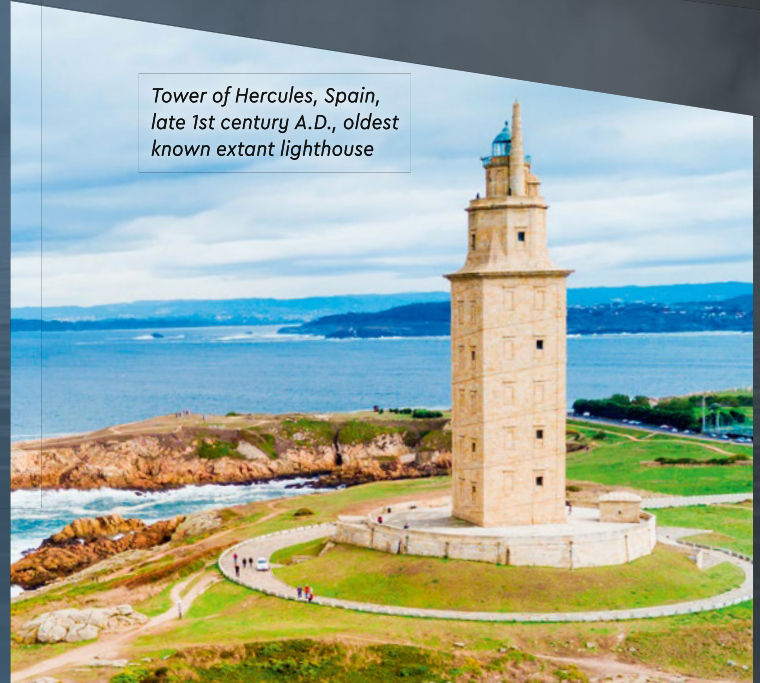

Île Vierge, France, 1902, world's tallest traditional stone lighthouse (82.5 meters/271 feet)

For as long as humans have travelled the seven seas, safe navigation has been vital to explorers and travellers, fishermen and merchants, navies and blue-water sailors. Stone arrangements, bonfires, cressets or braziers were used as coastal landmarks to help seafarers steer clear of perils, day and night.

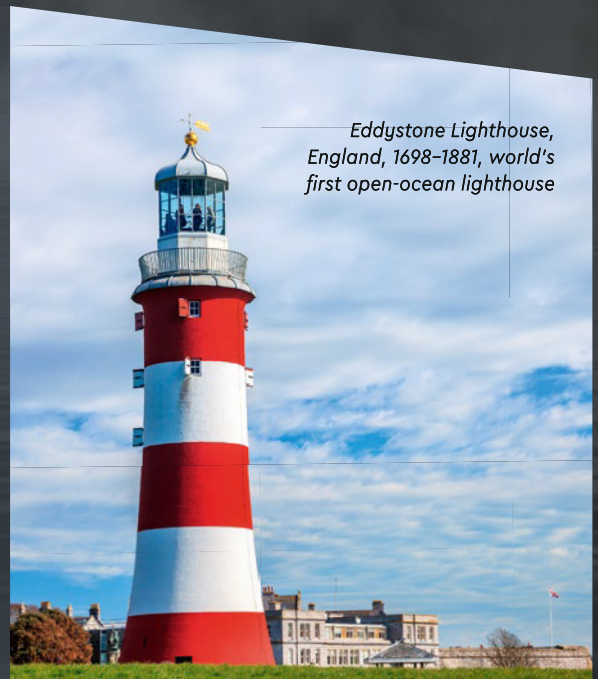

The earliest known stone lighthouse that resembled the structures we know today, the Lighthouse of Alexandria, was built in Egypt over 2,000 years ago. Until the early 1900s, lighthouse keepers would live in accommodations on the property and be available around the clock to keep candles, coal, sperm whale oil, kerosene, paraffin, or gas flames burning.

Each lighthouse is unique, with signature colours or features to make them easily recognisable in daylight, too. As landmarks in the geographical sense, and in technological advances, these beacons continue to keep sailors safe. Additional safety equipment like foghorns and the electronic Automatic Identification System (AIS) are now standard in most lighthouses, and most are fully automated and maintained by official agencies.

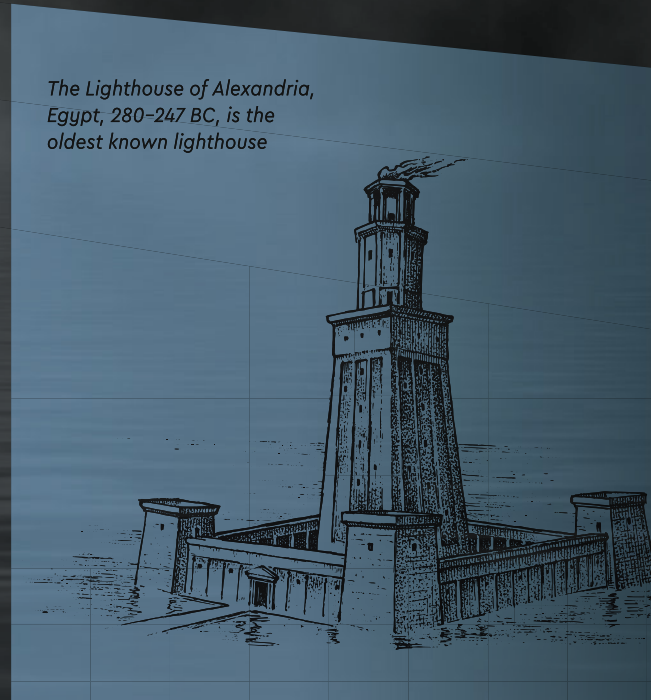

With more than 23,500 lighthouses covering 598,675.5 kilometres (372,000 miles) of coastline around the world, they represent part of our collective history, adventure and the promise of safe havens in a stormy sea.

Tower of Hercules, Spain, late 1st century A.D., oldest known extant lighthouse

Eddystone Lighthouse, England, 1698–1881, world's first open-ocean lighthouse

The Lighthouse of Alexandria, Egypt, 280–247 BC, is the oldest known lighthouse

The Fresnel lens

Obviously, the further a lighthouse beacon can reach in the worst weather conditions, the better. During the 1600–1700s, mirrors, parabolic reflectors and Argand lamps created increasingly brighter beams. The Fresnel lens, invented in 1821, revolutionised the construction of lighthouses. Through layers of ring-shaped glass lenses, a light source could now be concentrated into a narrow beam, dramatically enhancing both the intensity and nominal range of light. This was likely the most significant development in lighthouse design until the introduction of electrical lights, and it is still in use today.

Fresnel lenses used in lighthouses are now often made of plastic, making them both lighter in use and cheaper to manufacture.

With modern, automated rotation functions and electrical light sources, they can create powerful range and enhance visibility. Fresnel lenses are also used in floodlights, ship lanterns and even in cameras.

To recreate the characteristic rotating light function, the LEGO® Ideas design team developed a LEGO version of the Fresnel lens. A lot of research went into replicating the original engineering of the lens, followed by performance tests to achieve a smooth and authentic experience.

Meet the Fan Designer

Sandro with his original model.

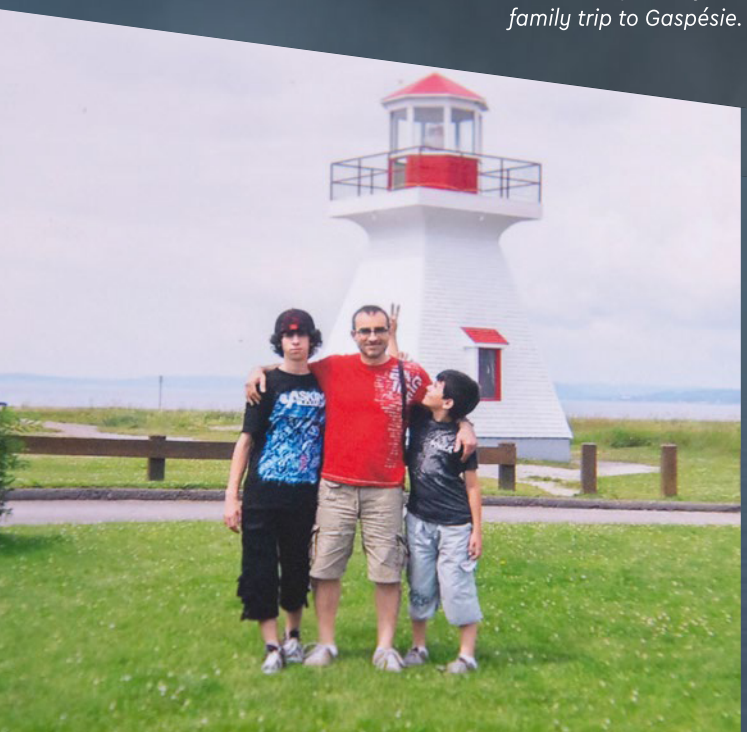

Sandro Quattrini (LEGO® Ideas name: Roses Must Build) is a 20-year-old film animation student from Canada. When not busy at university, he spends time with friends, or rearranges his LEGO collection, very often into new builds.

"I've been building LEGO sets since I was five years old. It's a way to unplug and relax. I love building tall structures. My mother loves lighthouses and has been telling me to build one ever since we took a trip around the Gaspésie Peninsula (Quebec) years ago. We visited enormous stone lighthouses on rocky beaches and small, abandoned wooden ones. From titanic structures that tower over their towns to cosy little houses that sit calmly far away from civilisation, where all you hear is the sound of waves crashing against rocks. That's the essence I wanted to capture, and their solitary nature.

I built the lantern room first, then two sides of the tower and only then did I think of adding the turning-light mechanism! Everything took time and trial-and-error, and my limited selection of bricks forced me to be creative with shapes and techniques. It's a challenging and rewarding experience. It was a huge surprise when it reached 10,000 supporters. I didn't realise it had been featured on LEGO fan websites and blogs. I am so thankful for everyone's support. Enjoy building!"

Meet the LEGO® Lighthouse Keepers

"I am a huge fan of maritime history and lighthouses. They were mechanical and civil engineering marvels of the 19th century, with the sole, noble purpose of protecting mariners. Sandro's design was amazing, and I wanted the model to stay true to his original design. The challenge was to make the electronic components fit into the model without compromising the building process, looks or playability. I have enjoyed designing this model immensely, especially the lantern room, and I hope that people will enjoy building the model and discovering all the details we have incorporated into it."

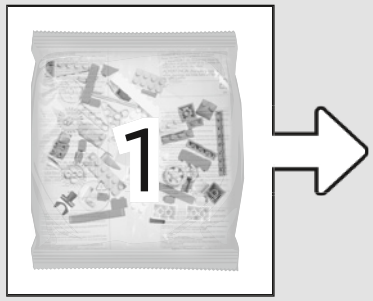

–Luka Kapeter,
LEGO® Senior Model Designer

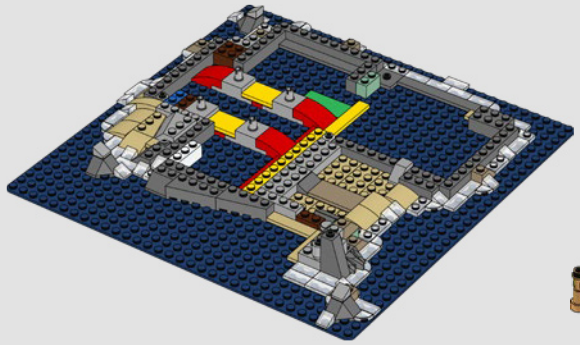

"We incorporated lots of graphic design details and references to Sandro and his passion. My favourites are the map of the Gaspésie Peninsula on the desk, the sepia photo of Sandro and his family and a 19th century 'portrait' as a nod to the era of the invention of the Fresnel lens. All the details really set the mood for the model."

–Claus Tannebæk Madsen,
LEGO® Senior Graphic Designer

"The lens design is dependent on several variable dimensions. The LEGO® System sets some of those dimensions in stone (like position of the light source compared to the lens itself), and that makes some parts of the design process easier and others more of a challenge. In the end I think we struck a nice balance, with a good light beam and the iconic look of a real lighthouse lens."

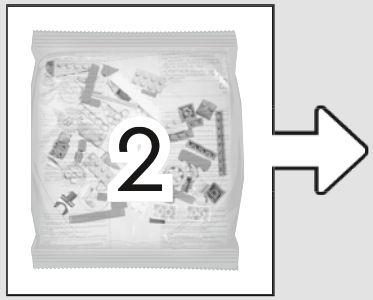

–Peter de Fine Licht,
LEGO® Senior Play Designer, Elements

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.

Caution: changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This Class B digital apparatus complies with Canadian ICES-003.
Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.
