LEDriving® headlights for VW Golf VII

ECE approved

The LEDriving® headlights for VW Golf VII are fully ECE compliant for a replacement of OEM halogen VW Golf VII headlights. The product bears the ECE approval mark that is mandatory for all approved automotive components. They are approved according to R6, R7, R48, R87 and R112 and may therefore be installed and used in Europe. Since the target luminous flux of the low beam does not exceed 2000 lumen, the ECE R48 headlamp can be installed without additional beam level adjustment and headlight cleaning system.

The headlight is therefore registration free. This does not include individual custom requirements of countries, in addition to the standardized ECE certification of the product.

Note

The LEDriving® headlights for VW Golf VII were designed according to the European car model of VW. This means that local adaptations of the manufacturer may have an impact on the functionality of the LEDriving® headlights.

Best regards
