i pro 2300

Resulting from the latest technology in the area, i pro 2300 from BaByliss is a top-of-the-range, professional hairdryer that has the following technical features:

- 2300 Watts of power
- an innovative compressor system that increases the airflow for ultra-fast drying
- a high performance professional AC motor
- ionic technology: the ions generated by the hairdryer neutralise the static electricity that sometimes occurs on hair during drying. Moreover, it increases the efficiency of leave-in hair care: hair is smoother, softer and shinier.
- two ultra-fine concentrator nozzles H 6mm X W 75mm and H 6mm X W 60mm let you dry and style with great precision. The smaller concentrator nozzle is suitable for short hair and the larger concentrator nozzle is perfect for blowdrying medium-length to long hair.

USE

The concentrator nozzle lets you direct the airflow precisely, it is particularly recommended for straightening and styling hair. To help, use a round brush for blowdrying. Begin with the hair underneath by holding the rest up with a clip. Place the hairdryer with

the concentrator nozzle at right angles to the brush and unroll the selected section from the roots to the tips.

i pro 2300 from BaByliss has 2 temperature and 2 speed settings:

Speed/ Temp.	Speed II	Speed I
Higher T°	To dry wet hair	To style thick, curly hair
Average T°	To dry damp hair	To style normal and fine hair Volume

The cool-air position sets the style for optimal final results.

MAINTENANCE

To maintain the efficiency of the hairdryer, clean its back grille regularly with a soft, dry brush. To remove the filter, simply turn it gently then lift it off.
